edge() argument shorthands

Diagram-level options

CeTZ integration

Node bounds, inset, and outset

Corner edges

Double node strokes

Relative and absolute extrusion lengths

Custom node sizes

Make sure provided dimensions are exact, not affected by node inset.

both

Example

Make sure node or edge labels don't pick up equation numbers!

$$a^2 \quad (1)$$

$$b^2 \quad (2)$$

Axes configuration

Implicit from and to points

Edge positional arguments

Explicit named arguments versus implicit positional arguments.

Each row should be the same thing repeated.
