Arc edges

Matching math arrows

Compare to \rightarrow , \Rightarrow , \Rrightarrow , \twoheadrightarrow , \hookrightarrow , \mapsto .

Our output versus reference symbol in default math font.

Double and triple lines

Diagram $A \xrightarrow{f} B$ and equation $A \rightarrow B$.

Diagram $A \xRightarrow{f} B$ and equation $A \Rightarrow B$.

Diagram $A \xRightarrow{\!\!\!f} B$ and equation $A \Rrightarrow B$.

Arrow head shorthands

"->" =

Automatic label placement

Default placement above the line.

Reversed y -axis:

Crossing connectors

edge() argument shorthands

edge () stroke

Diagram-level options

CeTZ integration

Corner edges

Double node strokes

Relative and absolute extrusion lengths

Custom node sizes

Make sure provided dimensions are exact, not affected by node inset.

both

Node inset and outset

What 5mm inset should look like:

A diagram node with 5mm inset:

A diagram node with 5mm outset:

Circular insets:

Example

Make sure node or edge labels don't pick up equation numbers!

$$a^2 \quad (1)$$

$$b^2 \quad (2)$$

Axes configuration

Implicit from and to points

Edge positional arguments

Explicit named arguments versus implicit positional arguments.

Each row should be the same thing repeated.

$$\begin{array}{lll} A \longrightarrow B & A \longrightarrow B & A \longrightarrow B \\ A \xrightarrow{\pi} B & A \xrightarrow{\pi} B & A \xrightarrow{\pi} B \\ A \xrightarrow{\tau} B & A \xrightarrow{\tau} B & A \xrightarrow{\tau} B \\ A \xrightarrow{+} B & A \xrightarrow{+} B & A \xrightarrow{+} B \end{array}$$

Math-mode diagrams

The following diagrams should be identical:

$$\begin{array}{ccc} G & \xrightarrow{f} & \operatorname{im}(f) \\ \pi \downarrow & \nearrow \tilde{f} & \\ G/\ker(f) & & \end{array}$$

$$\begin{array}{ccc} G & \xrightarrow{f} & \operatorname{im}(f) \\ \pi \downarrow & \nearrow \tilde{f} & \\ G/\ker(f) & & \end{array}$$

Nodes in math-mode

Relative node coordinates

$$\begin{array}{ccc}
 G & \xrightarrow{f} & \text{im}(f) \\
 \pi \downarrow & \nearrow \tilde{f} & \\
 G/\ker(f) & &
 \end{array}$$

Edge paths

Dashed edge paths

Custom node shapes

Intersection finding

Off-center edges

Edge shift

Label fill

Line decorations

$A \leftarrow \text{~~~~~} \rightarrow B \leftarrow \text{~~~~~} \rightarrow C \leftarrow \text{~~~~~} \rightarrow$
